Figure 6

Figure 1. The effect of the number of iterations on the accuracy of the proposed algorithm. The figure shows two plots side-by-side. The left plot shows the accuracy of the proposed algorithm (in %) versus the number of iterations (from 0 to 100). The right plot shows the accuracy of the proposed algorithm (in %) versus the number of iterations (from 0 to 100).

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the medium containing 100 mg/l of tetracycline. The cells were harvested at the stationary phase of growth and adjusted to the concentration of 10⁸ cells/ml. The cells were then adjusted to the concentrations of 10⁷, 10⁶, 10⁵, 10⁴, 10³, 10², and 10¹ cells/ml. The cells were then used for the transformation of *Agrobacterium* strains. The transformation efficiency was determined by the number of transformants per 10⁸ cells. The data are presented as the mean ± SD of three independent experiments.
